The fact that this battery is the best is understandable. Birds following this strategy are predicted to stop more en route to refuel 10 and because they are less time constrained 11they may be more inclined to wait for favorable migration

conditions Many empirical studies have supported elements of these general predictions relating to pre-breeding versus post-breeding migration 1213 However, not all studies have detected seasonal differences in migration speed 151617 and several studies have found patterns opposite to the above predictions 181920 These reverse patterns suggest that there may be some advantage for a slower migration in the pre-breeding season, such as to minimise energy expenditure prior to breeding, or it could result from atypical environmental conditions such as cold temperatures or high ice cover at breeding areas that slow down this pre-breeding migration.
